INNOV-IS NV180

# Getting started just got easier.

Forget everything you know about complicated sewing machines.

From setting up for your first test stitches to confidently navigating the rest of your machine's features, Brother have every step of the way covered to make sure your sewing experience is off to an easy start.

## Support at your fingertips

---

Believe it or not, people don't like reading manuals! Watch the Brother how-to videos online, whenever you want and as often as you want on your smart phone or tablet. Even an experienced sewer is bound to pick up a trick or two for setting up and using their machine. The Brother Support Centre App is free and yes, includes the Operation Manual for those who prefer to read their instructions.

## Set up in minutes

---

In a hurry? Isn't everyone! Your machine has been designed for a hassle-free set up. From the advanced one-action needle threader which is everyone's dream to the jam-resistant bobbin that simply drops into its case – there's no need to turn the wheel or hold the bobbin thread when you start sewing, everything has been designed to get you sewing quicker.

## Helpful on-screen prompts

---

When you are ready to try a new stitch – there's no need to consult the manual. Simply select the stitch and the bright LCD screen displays which presser foot to snap on and adjusts the stitch settings to suit. There's other prompts too, all designed to intuitively guide you along the way. Clever!

## Convenient touch controls

---

Welcome to the new way of sewing – everything is at your fingertips and it's fun! You don't even have to use the foot pedal if you don't want to. Press the start/stop button to start stitching and press the button again to stop. Reverse stitching, or needle up or down - there are buttons for those functions too. The NV180 even has a button to automatically trim your threads. Now this is sewing.

# Quality you can count on year after year.

Welcome to Brother's renowned Innov-is range of machines.

The flagship of Brother's sewing, quilting, embroidery and crafting machines, Innov-is is synonymous with precision engineering and technology, delivering the best of Brother's ranges to discerning enthusiasts that rely on quality.

## Innov-is engineering

---

Designed for years of durability, within the resin exterior, a robust metal frame ensures your Innov-is machine is a solid investment. Built to reduce vibration and shake when sewing, these models also draw from the design of Brother's larger Innov-is machines and feature a fixed needle bar for added needle stability when stitching.

## Innov-is performance

---

The powerful motor that drives your Innov-is machine is strong enough to handle bulky layers of heavyweight fabrics such as denim without strain. The easy computerised settings make it possible to adjust your stitches and speed to suit a wide variety of fabric types and thicknesses, including delicate sheers and stretchy knits. Your Innov-is machine a very versatile sewing companion.

## Innov-is experience

---

Effortless sewing begins with the quality of the fabric feeding system. In an Innov-is machine, for enhanced fabric handling, a longer presser foot ensures more contact with your fabric as you sew. Underneath your fabric, 7 precision engineered feed dogs grip and move your fabric. Watch as your machine feeds the fabric through, stitch by stitch, you simply guide the fabric's direction. It's like cruise control.

## Innov-is peace of mind

---

For reliability and hassle-free sewing, you can't go wrong with an Innov-is machine by Brother. That's why Innov-is Series machines are backed with a 3 year mechanical warranty and an extended 5 year electrical/computer warranty. Thinking even longer term? Brother offers support for the life of your Innov-is machine. Should you ever need it, Brother has a network of authorized parts and service centres around the country.
